I. Introduction

IWS provides the ODBC interface to exchange data with databases. This document describes how to configure and test an ODBC data source for the SQL Database.

II. Configuration

In order to configure the data source for the SQL Server Database, please follow the steps below.

1. Open Control Panel -> Administrative Tools -> Data Sources (ODBC).
2. In the ODBC Data Source Administrator window, click the Add button.
3. In the *Create New Data Source* window, select **SQL Server**.

5. Select the method for verifying the authenticity of the login ID.

**Note:** The configuration in the SQL Server Database must correspond to the one you enter here. For example, you must use the same **Login ID** for both. On the **Database properties -> Security** tab, select the same authentication method.

6. Keep the default settings, and click the **Next** button.
7. Keep the default settings, and click the Finish button.

8. Click the Test Data Source button.
If the test was successful, you will receive the TESTS COMPLETED SUCCESSFULLY message and be able to communicate with IWS without any issues.
